Practicum

1. <u>**Name of Practicum:**</u> **Static HTML webpage**

Developing a static HTML page using basic HTML elements, lists, tables, formatting, and image elements is a fundamental skill in web development that plays a crucial role in building structured and visually informative websites.

2. Procedure:

1. Begin with the HTML Declaration and Structure
   - Start with `<!DOCTYPE html>` to define the document type, then wrap content inside `<html>`, `<head>`, and `<body>`.

2. Define Page Identity
   - Set the page's name using `<title>` and add a favicon with `<link rel="icon">`.

3. Apply Visual Styling
   - Use the `bgcolor` property in `<body>` for background color and `<font>` to specify text color and typeface.

4. Organize Content with Headings
   - Structure your sections using heading tags like `<h1>`, `<h2>`, and `<h3>`.

5. Embed Media Elements
   - Integrate sound using `<audio>`, display pictures with `<img>`, and add motion with `<video>`.
   - For galleries, use `<figure>` to group images and `<iframe>` for external video embeds.

6. Arrange Information in Tables
   - Present data systematically with `<table>`, using `<tr>` for rows, `<th>` for headers, and `<td>` for cells.

7. List Items and Steps
   - Use `<ul>` for bullet points, `<ol>` for numbered instructions, and `<li>` for each entry.

8. Create Navigation and References
   - Link to other resources or pages using `<a>`.

9. Mark Sections and Footer
   - Use `<header>` for introductory content and `<footer>` for closing notes or credits.

10. Center and Align Elements

- Employ `<center>` or alignment attributes to position text or images.

11. Show Edits or Humor
    - Use `<del>` to cross out words for emphasis or fun.

12. Ensure Proper Tag Closure
    - Double-check that every tag is correctly opened and closed for valid markup.

3. Actual Resources used:

Sno	Name of Resource	Broad Specification	Quantity	Remark (if any)
1.	Operating system	Windows 11 Home Single Language	1	
2.	Programming Language	HTML(Hyper text Markup Language)	1	
3.	Software development kit	Not Applicable		
4.	Libraries	Not Applicable		
5.	Graphics/Animation tool	Not Applicable		
6.	Front End tool	VS code, Browser(Microsoft Edge)	1 each	
7.	Back End tool	Not Applicable		
8.	Virtual lab	Not Applicable		
9.	Specific Hardware	Not Applicable		
10.	Simulation/Emulation tool	Browser(Microsoft Edge)	1	

4. Actual Procedure Followed:

Planning & Requirements Gathering

- Identified the purpose of the webpage

- Listed the required features.

- Chose the theme, layout style, and color scheme.

Setting Up the Development Environment

- Installed/used a code editor (VS Code).

- Created a project folder and subfolders for HTML and images.

Designing the Structure

- Wrote the basic HTML skeleton.

- Saved and organized all files in the correct folders.
5. Observation :

- Different tags were used to perform different tasks in the html document.

    ### 1. Ambient Music for Instant Atmosphere
    Both Kitchen.html and TekWik.html greet visitors with background music, making the experience lively and memorable.

    Click here for ambient music! ->
    <audio src="../../Recipe/jazz.mp3" controls autoplay loop>
       Audio playback is not supported in your browser.
    </audio>

    ### 2. Floating Video for Dynamic Visuals (Kitchen.html)
    A video floats to the right, adding movement and drawing the eye immediately.

    <div style="float:right;">
       <video width="400" autoplay muted loop onclick="window.open('../../Practicum-2/Website-1/cooking.mp4')">
          <source src="../../Recipe/cooking.mp4" type="video/mp4">
          Your browser does not support the video tag.
       </video>

3. Recipe Table of Contents with Internal Links (Kitchen.html)

A clickable table lets users jump straight to their favorite recipe, enhancing navigation.

```
<table border="2px">
   <tr>
      <th>Sno</th>
      <th>Recipe name</th>
   </tr>
   <tr>
      <td>1</td>
      <td><a href="#momo" style="color:#d3cda5;">Momo</a></td>
   </tr>
